Fire Doors – Do's and Don'ts

There are a number of fire doors in your building, both your own and in communal areas. These are there for your safety and inspected on a routine basis by Jigsaw Homes.

However, you are also responsible for the doors in your building.
If you notice any damage to any fire door, its strips or smoke seals, or a door not self-closing properly, then please contact Jigsaw Homes straight away on **0300 111 1133** and tell your caretaker.

Your Flat Entrance Fire Door

DO

- Look after your door
- Keep your door in good condition and report any issues immediately

DON'T

- Drill or screw anything to the door as you will compromise its fire rating. This means door bells, nails for decorations, cables, or by changing components such as handles or door knockers

- Disconnect the closing device
  If you do, you will be recharged for the cost of buying and fitting a new door

Communal Fire Doors – Important

- All communal fire doors must remain in good condition

- A closing device is installed on communal fire doors and must not be disconnected at anytime

  Communal Fire Doors may be held open via electronic devices- **DO NOT** interfere with these devices. These fire doors will automatically close on the activation of the fire alarm

- Fire doors **MUST NOT** be wedged open at anytime

- Fire doors must not be tampered with i.e. damaged, removed or obstructed

Thank you for your cooperation.

Creating homes. Building lives.
